### What is an e-business modelling suite

- ◆ Supports the design, modelling and optimization of business processes
- ◆ Brings the business in control and less dependent on IT
- ◆ Helps the business to improve the quality and the performance of the design of webforms
- ◆ Simplifies the creation and maintenance of knowledge rules and business scenarios
- ◆ Results in shorter iterations of the design and development phases of webforms and business processes

### Features

- ◆ Webform and flow design
- ◆ Knowledge rule and business scenario design
- ◆ Version control
- ◆ Standard design documentation
- ◆ Use of pre-fab building blocks
- ◆ Impact analysis between versions
- ◆ Preview of webforms and publishing to a testportal
- ◆ Creation and maintenance of testscenario's
- ◆ Automated testing
- ◆ Based on XForms open standard

### Modules

- ◆ *B!forms*  
for webform design
- ◆ *B!rules*  
for knowledge rules and business scenario design
- ◆ *B!analyser*  
for data analysis and data visualisation of submitted webform data
- ◆ *B!process*  
for the design (based on BPMN2 open standard) and execution of webform based workflow and business processes
- ◆ *B!monitoring*  
for the monitoring of performance, tasks, workflows and business processes

### When should you use it

- ◆ When you want to be less dependent on IT and Operations
- ◆ When you want to be in complete control over your own design process and documentation
- ◆ When rules and laws change regularly
- ◆ When you want to use (more) proven Open Source components and frameworks which are based on Open Standards
- ◆ When you want to save time and money by eliminating unnecessary development-iterations and versions

### Agile support

*B!smart* is a platform that supports all stakeholders and which allows you to make quick and simple changes caused by internal or external reasons or factors to support business agility.

### Fully managed SaaS solution

- ◆ Cloud based, modern, fully integrated web application
- ◆ High level of security by using VPC (Virtual Private Cloud)
- ◆ Use of proven Open Source components and frameworks and based on Open Standards
- ◆ No worries about maintenance and support; Complete solution
- ◆ All-in-one price

### and more...

- ◆ Pilot / Proof of Concepts (PoC) implementation – let us help you and guide you through the whole evaluation process with specialized consultancy and best-practices advice
- ◆ Start-up support – let us help you set up, design and deploy your first webforms or business processes
- ◆ Custom development – we develop custom adapters and connectors for the integration with existing digital portals, systems and/or frameworks.
